# Subject Index of Volume 117

Age-forming
Materials aspects of age-forming of Al–*x*Cu alloys, 354
Al-alloys
Materials aspects of age-forming of Al–*x*Cu alloys, 354
Aluminium alloys
Modelling the evolution in microstructure and properties during processing of aluminium alloys, 333
Aluminium extrusion
Development of microstructure and texture during high temperature equal channel angular extrusion of aluminium, 169
7175 aluminum alloy
Heat treatment technique optimization for 7175 aluminum alloy by an artificial neural network and a genetic algorithm, 84
Aluminum-matrix composite
Numerical study on perforation behavior of 6061-T6 aluminum matrix composite, 125
Amorphous
The effects of the concentration of individual reactants on Fe–Ni–P–B nanoparticles fabricated by chemical reduction, 37
Ancient blacksmiths
Ancient blacksmiths, the Iron Age, Damascus steels, and modern metallurgy, 347
Artificial neural network
Heat treatment technique optimization for 7175 aluminum alloy by an artificial neural network and a genetic algorithm, 84
Austenitic stainless steel
Fatigue properties of high nitrogen steels, 364

Ball-end milling cutter
A study of a design and NC manufacturing model of ball-end cutters, 183
Blade with a damper platform
Physical modeling of the forging of a blade with a damper platform using plasticine, 62
Body-centered cubic
Microstructure, tensile, and creep behavior of O + BCC $Ti_2AlNb$ alloys processed using induction-float-zone melting, 400
Bulk metallic glass
Deformation behavior of Zr-based metallic glasses, 374

CAD
Virtual fitting trials in 'design for all', 255
Prediction and elimination of springback in straight flanging using computer aided design methods. Part 1. Experimental investigations, 262
Carbide degradation
Thermal spraying of nanostructured cermet coatings, 418
Carbon fiber laminate
Numerical study on perforation behavior of 6061-T6 aluminum matrix composite, 125
Carbon gradient
Surface conditioning by reactive gases during continuous annealing of sheet steel, 270
Carbon-thermal reduction
SiC powders prepared from fly ash, 52
Carburizing
Surface conditioning by reactive gases during continuous annealing of sheet steel, 270
Casting
Materials and manufacturing of advanced industrial gas turbine components, 386
Casting alloy
The role of the magnesium industry in protecting the environment, 381
Chemical reduction
The effects of the concentration of individual reactants on Fe–Ni–P–B nanoparticles fabricated by chemical reduction, 37
Coatings
Materials and manufacturing of advanced industrial gas turbine components, 386
Coherent energy waves
A novel approach to operating force evaluation in high strain rate metal-deforming technological processes, 226
Cold forging
Failure analysis of cold forging dies using FEA, 209
Competitors products
A systematic analysis of the areas of product optimisation, 222
Computer aided process planning
Intelligent approaches to tolerance allocation and manufacturing operations selection in process planning, 75
Computer simulation
Materials aspects of age-forming of Al–*x*Cu alloys, 354
Computer-aided design
Genetic algorithms in computer-aided design, 216
Conceptual design
Use of finite element method in trailer deck design, 238
Construction
The use of tailored blanks in the manufacture of construction components, 249
Continuous annealing
Surface conditioning by reactive gases during continuous annealing of sheet steel, 270
Corrosion
Effects of processing and manufacturing of high nitrogen-containing stainless steels on their mechanical, corrosion and wear properties, 424
Coupled with thermodynamic
Research on the "shear-extrusion" process to form large-scale cut-off valve bodies, 15
Creep
Evaluating creep in metals by grain boundary extraction using directional wavelets and mathematical morphology, 132
Development of highly creep resistant magnesium alloys, 391
Microstructure, tensile, and creep behavior of O + BCC $Ti_2AlNb$ alloys processed using induction-float-zone melting, 400
Internal-stress plasticity in titanium by cyclic alloying/dealloying with hydrogen, 409

Elsevier Science B.V.
PII: S0924-0136(01)01203-1

Curve of cutting edge
A study of a design and NC manufacturing model of ball-end cutters, 183
Cutting force
A novel approach to operating force evaluation in high strain rate metal-deforming technological processes, 226
Cyclic plasticity localization
Fatigue properties of high nitrogen steels, 364
Cyclic softening
Fatigue properties of high nitrogen steels, 364

3D FEM simulation
A 3D rigid–viscoplastic FEM simulation of compressor blade isothermal forging, 56
Damascus steels
Ancient blacksmiths, the Iron Age, Damascus steels, and modern metallurgy, 347
DBTT
Mechanical properties of ultra fine grained steels, 359
Deep-drawing processes
Analysis of an axisymmetric deep-drawn part forming using reduced forming steps, 193
DEFORM
Failure analysis of cold forging dies using FEA, 209
Deformation texture
A stability criterion for deformation and deposition textures of metals during annealing, 307
Design
Virtual fitting trials in 'design for all', 255
Directional wavelets
Evaluating creep in metals by grain boundary extraction using directional wavelets and mathematical morphology, 132
Dressing
Effects of truing/dressing intensity on truing/dressing efficiency and grinding performance of vitrified diamond wheels, 9
Ductility
Microstructure control by thermomechanical processing in β-Ti–15–3 alloy, 318
Ultrafine-grained ferrite steel with dispersed cementite particles, 329
Duplex stainless steel
Fatigue properties of high nitrogen steels, 364
Effects of processing and manufacturing of high nitrogen-containing stainless steels on their mechanical, corrosion and wear properties, 424
Dynamic fracture mechanism
Numerical study on perforation behavior of 6061-T6 aluminum matrix composite, 125
Dynamic recrystallization
Grain refinement in commercial alloys due to high plastic deformations and phase transformations, 300
Dynamic strain ageing
Effects of shear band formation on texture development in warm-rolled IF steels, 293

Early warning system
A systematic analysis of the areas of product optimisation, 222
Efficiency
Effects of truing/dressing intensity on truing/dressing efficiency and grinding performance of vitrified diamond wheels, 9
Elasto-plastic FEM
The formability limitation of the hole-flanging process, 43
Elbow pipe
A new hydroforming process for large elbow pipes, 28
Electrical discharge machining
Comparisons of neural network models on material removal rate in electrical discharge machining, 111
Electrodeposition texture
A stability criterion for deformation and deposition textures of metals during annealing, 307
Energy method
Analysis of stress distribution in caliber rolling by the energy method using finite-element division, 201
Equal channel angular extrusion
Development of microstructure and texture during high temperature equal channel angular extrusion of aluminium, 169
Equal-channel angular pressing
Improvement of mechanical properties for Al alloys using equal-channel angular pressing, 288
Ergonomics
Virtual fitting trials in 'design for all', 255
Extremely thin array of elements
A method to analyse the rolling of strip with ribs by 3D rigid viscoplastic finite element method, 146

Fatigue crack growth
Thermo-mechanical processing of high-performance Ti alloys: recent progress and future needs, 370
FEM
Analysis of stress distribution in caliber rolling by the energy method using finite-element division, 201
Prediction and elimination of springback in straight flanging using computer aided design methods. Part 1. Experimental investigations, 262
Finite element analysis
Failure analysis of cold forging dies using FEA, 209
Finite element method
Forming limit analysis of hemispherical-punch stretch forming, 32
Finite element analysis of polymer composites filled by interphase coated particles, 105
Use of finite element method in trailer deck design, 238
Flanging
Prediction and elimination of springback in straight flanging using computer aided design methods. Part 1. Experimental investigations, 262
Flute engagement
Flute engagement in peripheral milling, 1
Flute length
Flute engagement in peripheral milling, 1
Fly ash
SiC powders prepared from fly ash, 52
Forming
Simulation of axisymmetric sheet forming tests, 153
Analysis of an axisymmetric deep-drawn part forming using reduced forming steps, 193
Analysis of stress distribution in caliber rolling by the energy method using finite-element division, 201
Forming limit
Forming limit analysis of hemispherical-punch stretch forming, 32
Fracture
Failure analysis of cold forging dies using FEA, 209
Friction variation
A method to analyse the rolling of strip with ribs by 3D rigid viscoplastic finite element method, 146

Genetic algorithm
Intelligent approaches to tolerance allocation and manufacturing operations selection in process planning, 75
Heat treatment technique optimization for 7175 aluminum alloy by an artificial neural network and a genetic algorithm, 84
Genetic algorithms in computer-aided design, 216
Geometric model
A study on the evaluation of a model of the precise outside of the roller nest mill cutter, 178

Grain boundary extraction
Evaluating creep in metals by grain boundary extraction using directional wavelets and mathematical morphology, 132
Grain boundary sliding
Grain refinement in commercial alloys due to high plastic deformations and phase transformations, 300
Grain refinement
Improvement of mechanical properties for Al alloys using equal-channel angular pressing, 288
Grain refinement in commercial alloys due to high plastic deformations and phase transformations, 300
Grain size
Influence of spike current in different shaped waveforms on the hardness and grain size of nickel electroforms, 97
New concepts for ultra refinement of grain size in Super Metal Project, 341
Grinding performance
Effects of truing/dressing intensity on truing/dressing efficiency and grinding performance of vitrified diamond wheels, 9

Hall–Petch relationship
Mechanical properties of ultra fine grained steels, 359
Hardness
Influence of spike current in different shaped waveforms on the hardness and grain size of nickel electroforms, 97
Heat treatment
Heat treatment technique optimization for 7175 aluminum alloy by an artificial neural network and a genetic algorithm, 84
Heavy deformation
New concepts for ultra refinement of grain size in Super Metal Project, 341
Hemming
Prediction and elimination of springback in straight flanging using computer aided design methods. Part 1. Experimental investigations, 262
High nitrogen steel
Effects of processing and manufacturing of high nitrogen-containing stainless steels on their mechanical, corrosion and wear properties, 424
High strain rate deformation processes
A novel approach to operating force evaluation in high strain rate metal-deforming technological processes, 226
High temperature creep
Deformation behavior of Zr-based metallic glasses, 374
High velocity oxy-fuel
Thermal spraying of nanostructured cermet coatings, 418
High-strength Ti alloys
Thermo-mechanical processing of high-performance Ti alloys: recent progress and future needs, 370
Hole-flanging process
The formability limitation of the hole-flanging process, 43
Hopfield neural network
Intelligent approaches to tolerance allocation and manufacturing operations selection in process planning, 75
Hydrobulging
A new hydroforming process for large elbow pipes, 28
Hydroforming
A new hydroforming process for large elbow pipes, 28
Hydrogen
Internal-stress plasticity in titanium by cyclic alloying/dealloying with hydrogen, 409

ID3 algorithm
Application of ID3 algorithm in knowledge acquisition for tolerance design, 66
IF steels
Effects of shear band formation on texture development in warm-rolled IF steels, 293
Impact response
Numerical study on perforation behavior of 6061-T6 aluminum matrix composite, 125
Induction-float-zone melting
Microstructure, tensile, and creep behavior of O + BCC $Ti_2AlNb$ alloys processed using induction-float-zone melting, 400
Industrial gas turbines
Materials and manufacturing of advanced industrial gas turbine components, 386
Injection molding
Application of ID3 algorithm in knowledge acquisition for tolerance design, 66
Intensity
Effects of truing/dressing intensity on truing/dressing efficiency and grinding performance of vitrified diamond wheels, 9
Interphase
Finite element analysis of polymer composites filled by interphase coated particles, 105
Inverse envelope theorem
A study of a design and NC manufacturing model of ball-end cutters, 183
Iron Age
Ancient blacksmiths, the Iron Age, Damascus steels, and modern metallurgy, 347
Isothermal forging
A 3D rigid–viscoplastic FEM simulation of compressor blade isothermal forging, 56

Knowledge acquisition
Application of ID3 algorithm in knowledge acquisition for tolerance design, 66

Labor saving
Research on the "shear-extrusion" process to form large-scale cut-off valve bodies, 15
Large-scale valve bodies
Research on the "shear-extrusion" process to form large-scale cut-off valve bodies, 15
Limiting dome height
Forming limit analysis of hemispherical-punch stretch forming, 32
Limiting forming ratio (LFR)
The formability limitation of the hole-flanging process, 43
Local residual deformation
A method to analyse the rolling of strip with ribs by 3D rigid visco-plastic finite element method, 146
Low C–Si–Mn steel
Ultrafine-grained ferrite steel with dispersed cementite particles, 329
Low cycle fatigue
Fatigue properties of high nitrogen steels, 364
Thermo-mechanical processing of high-performance Ti alloys: recent progress and future needs, 370

Magnesium
The role of the magnesium industry in protecting the environment, 381
Magnesium alloys
Development of highly creep resistant magnesium alloys, 391
Manufacturing operations selection
Intelligent approaches to tolerance allocation and manufacturing operations selection in process planning, 75
Martensite
Ancient blacksmiths, the Iron Age, Damascus steels, and modern metallurgy, 347

Material properties
Research for a "new age of magnesium" in the automotive industry, 276
Material removal rate
Comparisons of neural network models on material removal rate in electrical discharge machining, 111
Mechanical milling
Mechanical properties of ultra fine grained steels, 359
Mechanical properties
Thermo-mechanical processing of high strength β-titanium alloys and effects on microstructure and properties, 311
Deformation behavior of Zr-based metallic glasses, 374
Effects of processing and manufacturing of high nitrogen-containing stainless steels on their mechanical, corrosion and wear properties, 424
Melting
Analysis of a melting model for an extruder with reciprocation, 21
Metal cutting
A novel approach to operating force evaluation in high strain rate metal-deforming technological processes, 226
Mg alloys
Research for a "new age of magnesium" in the automotive industry, 276
Mg components
Research for a "new age of magnesium" in the automotive industry, 276
Mg extrusions
Research for a "new age of magnesium" in the automotive industry, 276
Mg sheet
Research for a "new age of magnesium" in the automotive industry, 276
Microstructural modelling
Modelling the evolution in microstructure and properties during processing of aluminium alloys, 333
Microstructure
Thermo-mechanical processing of high strength β-titanium alloys and effects on microstructure and properties, 311
Microstructure control by thermomechanical processing in β-Ti–15–3 alloy, 318
Microtexture
Microstructure, tensile, and creep behavior of O + BCC $Ti_2AlNb$ alloys processed using induction-float-zone melting, 400
Molding conditions
Neural networks for the dimensional control of molded parts based on a reverse process model, 89

Nanoparticles
The effects of the concentration of individual reactants on Fe–Ni–P–B nanoparticles fabricated by chemical reduction, 37
Nanostructured cermet coatings
Thermal spraying of nanostructured cermet coatings, 418
Neural network model
Comparisons of neural network models on material removal rate in electrical discharge machining, 111
Neural networks
Neural networks for the dimensional control of molded parts based on a reverse process model, 89
Neutron diffraction
Non-destructive measurement of residual stress by neutron diffraction, 395
Newtonian viscous flow
Deformation behavior of Zr-based metallic glasses, 374
Nickel-based alloys
Grain refinement in commercial alloys due to high plastic deformations and phase transformations, 300
Nitriding
Surface conditioning by reactive gases during continuous annealing of sheet steel, 270
Nitrogen
Effects of processing and manufacturing of high nitrogen-containing stainless steels on their mechanical, corrosion and wear properties, 424
Non-destructive methods
Non-destructive measurement of residual stress by neutron diffraction, 395
Non-traditional bainite
Microstructures and properties of direct-cooled microalloy forging steels, 324

Optimising
A systematic analysis of the areas of product optimisation, 222
Orientation relationship
Microstructure, tensile, and creep behavior of O + BCC $Ti_2AlNb$ alloys processed using induction-float-zone melting, 400
Orthorhombic
Microstructure, tensile, and creep behavior of O + BCC $Ti_2AlNb$ alloys processed using induction-float-zone melting, 400
Oxidation protection
Materials and manufacturing of advanced industrial gas turbine components, 386

Parameter-based control
Neural networks for the dimensional control of molded parts based on a reverse process model, 89
Particle diagnostics
Thermal spraying of nanostructured cermet coatings, 418
Particles
Finite element analysis of polymer composites filled by interphase coated particles, 105
Pearlite
Ancient blacksmiths, the Iron Age, Damascus steels, and modern metallurgy, 347
Perforation behavior
Numerical study on perforation behavior of 6061-T6 aluminum matrix composite, 125
Peripheral milling
Flute engagement in peripheral milling, 1
Phase transformation
Grain refinement in commercial alloys due to high plastic deformations and phase transformations, 300
Internal-stress plasticity in titanium by cyclic alloying/dealloying with hydrogen, 409
Physical modeling
Physical modeling of the forging of a blade with a damper platform using plasticine, 62
Plastic deformation
Modelling the evolution in microstructure and properties during processing of aluminium alloys, 333
Plastic molding
Neural networks for the dimensional control of molded parts based on a reverse process model, 89
Plasticine
Physical modeling of the forging of a blade with a damper platform using plasticine, 62
Plasticity
Analysis of stress distribution in caliber rolling by the energy method using finite-element division, 201
Internal-stress plasticity in titanium by cyclic alloying/dealloying with hydrogen, 409
Precipitation
Microstructure control by thermomechanical processing in β-Ti–15–3 alloy, 318

Precipitation hardening
Materials aspects of age-forming of Al–*x*Cu alloys, 354
Process design
Analysis of an axisymmetric deep-drawn part forming using reduced forming steps, 193
Process modelingExpecting the unexpected, a must for accurate brakeforming, 244
Thermo-mechanical processing of high-performance Ti alloys: recent progress and future needs, 370
Pulse current electroforming
Influence of spike current in different shaped waveforms on the hardness and grain size of nickel electroforms, 97

Rare earths
Development of highly creep resistant magnesium alloys, 391
Rate sensitivity
Effects of shear band formation on texture development in warm-rolled IF steels, 293
Reciprocating extruder
Analysis of a melting model for an extruder with reciprocation, 21
Recovery
A stability criterion for deformation and deposition textures of metals during annealing, 307
Recrystallization
Modelling of recrystallization textures, 282
New concepts for ultra refinement of grain size in Super Metal Project, 341
Recrystallization texture
A stability criterion for deformation and deposition textures of metals during annealing, 307
Reinforcements and interferences of energy waves
A novel approach to operating force evaluation in high strain rate metal-deforming technological processes, 226
Residual stress measurement
Non-destructive measurement of residual stress by neutron diffraction, 395
Retained austenite
Microstructures and properties of direct-cooled microalloy forging steels, 324
Reverse process model
Neural networks for the dimensional control of molded parts based on a reverse process model, 89
Rigid visco-plastic FEM
A method to analyse the rolling of strip with ribs by 3D rigid visco-plastic finite element method, 146
Rigid–plastic finite element analysis
Research on the "shear-extrusion" process to form large-scale cut-off valve bodies, 15
Rigid–viscoplastic
A 3D rigid–viscoplastic FEM simulation of compressor blade isothermal forging, 56
Roller nest
A study on the evaluation of a model of the precise outside of the roller nest mill cutter, 178
Roller nest mill cutter
A study on the evaluation of a model of the precise outside of the roller nest mill cutter, 178
Rolling
Analysis of stress distribution in caliber rolling by the energy method using finite-element division, 201

Severe plastic deformation
Improvement of mechanical properties for Al alloys using equal-channel angular pressing, 288
Shaped waveform
Influence of spike current in different shaped waveforms on the hardness and grain size of nickel electroforms, 97
Shear bands
Effects of shear band formation on texture development in warm-rolled IF steels, 293
Shear-extrusion
Research on the "shear-extrusion" process to form large-scale cut-off valve bodies, 15
Sheet
Simulation of axisymmetric sheet forming tests, 153
Sheet bending
Expecting the unexpected, a must for accurate brakeforming, 244
Sheet metal bending
Prediction and elimination of springback in straight flanging using computer aided design methods. Part 1. Experimental investigations, 262
SiC powder
SiC powders prepared from fly ash, 52
Simulation
Simulation of axisymmetric sheet forming tests, 153
Modelling of recrystallization textures, 282
Simulation accuracy
A method to analyse the rolling of strip with ribs by 3D rigid visco-plastic finite element method, 146
Single crystals
Materials and manufacturing of advanced industrial gas turbine components, 386
Spike
Influence of spike current in different shaped waveforms on the hardness and grain size of nickel electroforms, 97
Springback
Prediction and elimination of springback in straight flanging using computer aided design methods. Part 1. Experimental investigations, 262
Stainless steel
Simulation of axisymmetric sheet forming tests, 153
Grain refinement in commercial alloys due to high plastic deformations and phase transformations, 300
Steel
The use of tailored blanks in the manufacture of construction components, 249
Surface conditioning by reactive gases during continuous annealing of sheet steel, 270
Strength
Microstructure control by thermomechanical processing in β-Ti–15–3 alloy, 318
Microstructures and properties of direct-cooled microalloy forging steels, 324
Ultrafine-grained ferrite steel with dispersed cementite particles, 329
Stress concentration
Finite element analysis of polymer composites filled by interphase coated particles, 105
Stress distribution
Analysis of stress distribution in caliber rolling by the energy method using finite-element division, 201
Superalloys
Materials and manufacturing of advanced industrial gas turbine components, 386
Supercooled liquid
Deformation behavior of Zr-based metallic glasses, 374
Superplasticity
Ancient blacksmiths, the Iron Age, Damascus steels, and modern metallurgy, 347
Internal-stress plasticity in titanium by cyclic alloying/dealloying with hydrogen, 409

Tailored blanks
The use of tailored blanks in the manufacture of construction components, 249

Technique optimization
Heat treatment technique optimization for 7175 aluminum alloy by an artificial neural network and a genetic algorithm, 84
Tensile properties
Improvement of mechanical properties for Al alloys using equal-channel angular pressing, 288
Tension
Microstructure, tensile, and creep behavior of O + BCC $Ti_2AlNb$ alloys processed using induction-float-zone melting, 400
Texture
Modelling of recrystallization textures, 282
Texture development
Effects of shear band formation on texture development in warm-rolled IF steels, 293
The compressor blade
A 3D rigid–viscoplastic FEM simulation of compressor blade isothermal forging, 56
The method of locally making a layer-built billet
Physical modeling of the forging of a blade with a damper platform using plasticine, 62
Thermal spraying
Thermal spraying of nanostructured cermet coatings, 418
Thermal stability
Improvement of mechanical properties for Al alloys using equal-channel angular pressing, 288
Thermomechanical processing
Thermo-mechanical processing of high strength β-titanium alloys and effects on microstructure and properties, 311
Microstructure control by thermomechanical processing in β-Ti–15–3 alloy, 318
Thermo-mechanical processing of high-performance Ti alloys: recent progress and future needs, 370
Titanium
Internal-stress plasticity in titanium by cyclic alloying/dealloying with hydrogen, 409
β-Titanium alloy
Thermo-mechanical processing of high strength β-titanium alloys and effects on microstructure and properties, 311
Microstructure control by thermomechanical processing in β-Ti–15–3 alloy, 318
Titanium alloys
Grain refinement in commercial alloys due to high plastic deformations and phase transformations, 300
TMCP
New concepts for ultra refinement of grain size in Super Metal Project, 341
Tolerance allocation
Intelligent approaches to tolerance allocation and manufacturing operations selection in process planning, 75
Tolerance design
Application of ID3 algorithm in knowledge acquisition for tolerance design, 66
Toroidal shell
A new hydroforming process for large elbow pipes, 28
Toughness
Microstructures and properties of direct-cooled microalloy forging steels, 324
Ultrafine-grained ferrite steel with dispersed cementite particles, 329
Transformation
New concepts for ultra refinement of grain size in Super Metal Project, 341
Transient process
Analysis of a melting model for an extruder with reciprocation, 21
Transportation industry
The role of the magnesium industry in protecting the environment, 381
Trim die
Failure analysis of cold forging dies using FEA, 209
Truing
Effects of truing/dressing intensity on truing/dressing efficiency and grinding performance of vitrified diamond wheels, 9
Tungsten carbide–cobalt
Thermal spraying of nanostructured cermet coatings, 418

Ultra fine grained steel
Mechanical properties of ultra fine grained steels, 359
Ultrafine grain structure
Ultrafine-grained ferrite steel with dispersed cementite particles, 329

Vehicle design
Use of finite element method in trailer deck design, 238

Warm rolling
Effects of shear band formation on texture development in warm-rolled IF steels, 293
Wear
Effects of processing and manufacturing of high nitrogen-containing stainless steels on their mechanical, corrosion and wear properties, 424
Work hardening
Modelling the evolution in microstructure and properties during processing of aluminium alloys, 333
Wrought alloy
The role of the magnesium industry in protecting the environment, 381
